DETAILED ACTION

Claim 53 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 53 erroneously depends from itself.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 48-72 are rejected under 35 U.S.C. 103(a) as being unpatentable over taken with Chen et al. taken with Hall et al.

Chen et al. teach pad 16, passivation 20 comprising silicon oxide 20A and silicon nitride 20B, forming photoresist mask 22, dry etching passivation 20 to the pad 16, including isotropic etching and anisotropic etching. See Fig. 4, column 3 line 40 to column 6 line 43. Although Chen et al. recite the process for etching, e.g., column 5 lines 39-40 and not a method of fabricating a semiconductor device, such application would have been apparent in Chen et al. and obvious to one skilled in the art over Chen et al. as evidenced by Hall et al., column 4 line 20 et seq., wherein the process corresponds to a process for forming a semiconductor device. It would have been obvious and would have been within the purview of one skilled in the art to have selected and optimized the desired film thickness and tapered angle given the angle shown in Chen et al. Figs 3 and 4. Regarding the alternative materials of silicon oxynitride, such is well known passivation materials as evidenced by Hall et al.,

Art Unit: 2814

column 2 lines 27-43 and the selection of suitable alternative materials thus would have been obvious. The completion of the connection including the provision of a bump electrode including a barrier on the exposed bonding pad is well known in the art and thus would have been obvious.

Applicant's arguments with respect to claims 48-72 have been considered but are moot in view of the new ground(s) of rejection.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
